

# Get the **REAL DIRT ON CLEAN**

We all go to great lengths to protect our families....  
we want our homes to be as germ free as possible and smell clean and fresh.

What if some of the very products we use to make our homes safe and clean  
were harming our families.....and the environment?

Join us for an interactive workshop to learn about family and earth-friendly alternatives to traditional household cleaners and other products.

Tuesday February 2, 11:00 a.m.

Heights Parent Center

Free and kids are welcome!

(Pack a lunch and stay for our Lunch Bunch Drop-In beginning at noon!)

*We hope you'll join us to learn ways to have a greener and safer home.  
We'll have information on products that actually cost less and work as  
well or better than what you find in the store!*

**DID YOU  
KNOW?**

Chlorine bleach  
is the chemical most  
frequently involved in  
household poisonings  
in the US.

When we clean  
the tub and then  
bathe our kids,  
there are toxic  
chemical residues  
left behind.

**What's under  
YOUR sink?**

When we spray off  
the high chair with a  
strong cleaner we (and  
baby) breathe in  
toxic fumes!

*See some demos, test some products,  
have fun and bring a friend...*

*If you purchase any products  
it helps HPC!*
